

Tech Upskilling Platform

Platform for Education

Tech education made simple

Technical upskilling and reskilling processes are in our DNA. Before launching Teamsharq, we created a tech training company, offering both programming bootcamps and advanced IT training for experts. Thanks to that, we know exactly how hard it can be to provide top-notch tech classes online.

With Teamsharq instructors and students can have access to Workspaces with exactly the same configuration.

We've asked more than 20 other companies and education institutions what are their main challenges during remote tech courses. Here are the results:

- Tech courses require professional software. Students do not have the hardware and software to participate in a course and time or knowledge to configure the course environment by their own.
- During live online courses, instructors struggle to supervise and help students. Existing solutions focus on teleconferencing features.
- No tools to support the entire learning process in instructor-led courses.
- Asynchronous collaboration between instructor and student is practically impossible. Both the student and the instructor need to be online at the same time.
- Troublesome security issues during tech online courses.

There has to be a better way!

And there is. Imagine being able to create Linux or Windows-based environments at will, install there any software of choice, and replicate all for students with a press of the button. Instructors can also choose one of many pre-configured environments prepared by us. Everything is available directly in a web-browser. Moreover, all the audio-video communication features are built-in. Instructors don't need any extra, 3rd party software. Sounds good?

So let's talk!**Leroy Nimley***Teamsharq Official Partner*leroy.nimley@rubeus-solutions.comwww.teamsharq.com
